Part B for September 1918

SUBJECT

Water Supply to Tyamagondlu Town.

Sl. 1. Extract from the Tahsildar's Notes of Inspection of Tyamagondlu Dt 27—7—13.

The question whether by bunding a pond or tank at a higher level, a supply could not be secured to the wells should be investigated by the Dy. Commr in consultation with the Executive Engineer and a report made early. Other possible alternatives should also be discussed.

Sl. 2 To the Ch Engineer and S. C. Bangalore. Dept No 3830—1 Dt 7/9/18

Sanctions the estimate and directs that the cost of the improvement of the water supply be met from the funds of the Mk. Cl. and that the work, if necessary be spread over two years.

for the supply of water to Trincomalee together with the Municipal Board's for financing it.

15 The scheme is to supply water from the Sandalwadi tank by installing an Hydraulic Ram under its sluice and pumping water to a point above the town. It provides for a supply to 7000 souls at the rate of 12½ gallons per head per day and is estimated to cost not more than Rs 20,000 (actual) & Rs 1200/- (recurring)

16 The Municipal Board are willing to set apart a sum of Rs 4000/- from their funds & towards the initial outlay besides and also propose to raise an additional sum of Rs 5000 by subscription from the townspeople. Their prayer is is that the balance may be met from State funds.

As regards the annual maintenance charges, they propose to realize the required amounts by levying a water rate

There is no provision at present, for the levying of water rate in Municipal Regulations

17 The Municipality can well afford to contribute a sum of Rs 4000 towards the initial outlay without affecting the required working balance for the current budget figures for the current year as

Opening balance (actual)	=	4989
Probable receipts	=	2937
Total . .	=	7926
Probable expenditure	=	2647
Probable closing balance	=	5479

& this balance is in excess of the prescribed minimum by Rs 4745/-. This Municipality has, besides, kept its normal expenditure well within its income. The average income & expenditure calculated on the figures for three years from 1907-1908 are Rs 2813 & 2230 respectively. It is therefore submitted that the Municipality is well able to meet the annual working expenses even with its present resources

the Maharaja of Mysore, Genl and Rev Depts

Sir,

In reply to your letter No 1879/Ml 118-3-2 dated 12th August 1913, and Memo No 6520/Ml 118-13 dated 27th September 1913, calling for a report for the supply of water to the -- town of Tyamagondlu, I have the honor to submit herewith copies of the inspection Memo of Mr J E A D'Cruz, Executive Engineer Bangalore Division, and the Tyamagondlu Municipal Board's -- Resolution, and to state as follows -

The Executive Engineer is of opinion that by the restoration of the Bidlur Tank, the irrigation under the Sandalwadi Tank can be restricted, an Hydraulic Ram can be installed under its sluice and water could be pumped to a required point, and thus supply -- water to a population of 7000 The whole scheme would cost not more than Rs 20,000/-, with an annual maintenance charge of Rs 120/- in addition.

The Municipal Board who were consulted to suggest ways and means have passed the following resolutions -

(1)The present population of the Municipality is only 4000 and the Executive Engineer has advocated a scheme to supply water to a population of 7000, hence the present estimate can be reduced to an appreciable extent

(2)That they would make arrangements for a contribution of Rs 2000/- from the townspeople

(3)That Rs 4000/- would be paid from the Municipal closing ba[illegible]

Enclosure 118-13/AC 32

Inspection Memo of J.E A. D'Cruz, Esq.,B C.E , Executive Engineer, Bangalore Division, on the Water Supply of Tyamagondlu Town

---

Present Water Supply condition

The source of water supply at present is well water from the several wells in the Fort & Pettah These wells are reported to run dry every year and to occasion great inconvenience therefore.

The Sondalvadi Tank is resorted to for drinking water as the water is said to be wholesome and uncontaminated

The Herikere tank channels which run near to town are also utilized for taking water for House hold and cooking purposes but its water is said to be not so potable as that of the Sondalvadi

Situation of Town

The town which is minor Municipality, has a population f 3500 souls and is situated on the slope of a spur with the Herikere Tank on the north-east and the Sondalvadi Tank and its valley on the south-west

The Fort is situated on the higher part of the and lower down the spur is the Pettah With the weir level of Hirikere assumed as 100.00 the highest point in the town is 148 00 and the weir of Sondalvadi is 103 82 The level of sills of sluices in these tanks is 88 35 and 91 07 respectively so that the highest portion of the town where there is a a well is about 58' above average sluice level of the tanks

The Manne Tank above Herekere which is very large tank is too far away to lead a channel for the town supply at a reasonable cost

The town in spite of its proximity to the Nedavanda and Dodbele Railway Stations has steadily declined in population owing to want of potable water and to the people consequently leaving it an d deserting their homes and to the yearly

33

yearly occurance of plague and Cholera The present population, it is believed, would considerably increase if -- potable water is made available

The present revenue of the Municipality is Rs 3,093/- and the Municipality have a surplus amount of Rs 3,500/-. The yearly expenditure of the Municipality is Rs 1600/- leaving surplus of revenue over expenditure of Rs 1493/-.

The town is so situated that it is not possible to have a tank above it that would increase the water supply of its wells

The deepening of the existing wells may so long as the tanks on either side of the town are full, result in a -- better supply in the wells, but when the tanks dry, the sub-soil water would naturally gravitate to the Valleys of the tanks below the town

The only cheap scheme for a supply of water to the town is to avail ourselves of the recent restoration of Bidlur Tank and restrict irrigation under the Sondalvadi Tank and install an Hydraulic Ram under its sluice and pump the water required to a point on the spur about R L 170,00 above the town which will command the whole and give a supply of 12½ gallons or 2 cft , a day for each individual assuming a population of 7000 This would necessitate 7 units of the tank being spared from cultivation for drinking water,but as stated above, now that Bidlur Tank is restored, the cultivation in its water spread depending on Sondalvadi would cease and lands below Bidlur depending heretofore on Sondalvadi and Herekere would be cultivated by water from Bidlur Tank

The whole scheme I estimate would not cost more than 30,000/-Rupees yielding an interest of Rs 600/- per annum The Municipality must be able to afford this annually from its Revenues, or if Government pay half the capital cost, the interest on Rs.10,000/- loaned to the Municipality -- would be only Rs.300/-.

34

The cost of maintenance would be practically nothing in case of an Hydraulic Ram and for supervision Rs 120/- annually or Rs.10/- a month only would be added to the expenditure of the Municipality which they can well afford it at present

If necessary a water tax however light would meet the interest of Government and also pay for the maintenance of scheme

Sir,

In inviting Kind reference
the marginally noted S 568 dated 20/8/14
communications regarding S 106 dated 21/8/14
the water supply project
to the town of Tyamagondlu,
I have the honor to state that towns
people have promised to contribute
5000/- towards the scheme, and
arrangements have been made by
themselves to collect the promised
subscription. The municipal Board
have

Sir,

With reference to your letter No 6954/Ml 118-13-20 dated 11th June 1918, regarding the water supply to the Tyamagondlu town I have the honour to inform you that the question has been under consideration for a long time One of the proposals put forward was to pump water by means of a hydraulic ram This was given up as impracticable Next, the construction of a storage tank was suggested, but there is no proper site for the same

2 The scheme for deepening the wells as per estimate of Rs 3,710 already forwarded has been recommended after taking into consideration the various proposals suggested before and the ability of the Municipality to finance the scheme

3 The file of papers is returned
